Investment process

The Fund aims to directly replicate the index composition via CDS index positions and cash collateral (typically investment grade European sovereign bonds with maturity <12 months). To minimise counterparty risk, CDS index trades are executed through regulated brokers and centrally cleared.

Investment objective

The Tabula European Performance Credit UCITS ETF (EUR) aims to track the iTraxx European Performance Credit Index (IEPC Index), less fees and expenses.

About the index

The IEPC Index provides diversified exposure to European corporate credit, primarily investment grade. To emphasise credit risk and reduce direct interest rate risk, it takes exposure via two liquid credit default swap (CDS) indices rather than corporate bonds:

- 80% iTraxx Europe 5y (125 investment grade entities, equal weight)
- 20% iTraxx Crossover 5y (75 sub-investment grade entities, equal weight)

The index reflects the return from selling protection on the current series of each CDS index. It takes total market exposure of 300%, allocated in an 80/20 ratio to iTraxx Europe and iTraxx Crossover respectively, and is rebalanced monthly. Visit TabulaIM.com for a detailed methodology.

Data: Tabula IM as of 30 November 2018. Charts show the percentage of total CDS index notional. Credit breakdown is based on S&P rating. CDS index ratios in table reflect the notional times the bond equivalent price relative to NAV (see index methodology for more information). Credit DV01 is the expected % change in NAV for a 1bp increase in credit spreads. The estimated yield calculation involves ageing and repricing the fund portfolio and assuming the spread curves remain constant. The calculation involves a number of assumptions and approximations including

Key risks

- No capital protection: The value of your investment may go down as well as up and you may not get back the amount you invested.
- Market risk: The fund is primarily exposed to credit risk. Returns will suffer if there is a default, or higher perceived risk of default, among the entities referenced by the CDS indices, or a write-down ("bail in") of an entity's debt by financial authorities. The fund may also be impacted by other factors affecting the value of debt securities issued by those entities, including changes in interest rates and exchange rates. When selling CDS on subordinate debt, such debt may be subordinate to senior debt.
- Leverage: The fund uses leverage, so losses may be magnified.
- Liquidity risk: If there are insufficient buyers or sellers of CDS indices, the fund may not be able to match index exposure exactly and investors may not be able to buy or sell fund units. Neither the index provider nor the Issuer make any representation or forecast on the Liquidity of CDS transactions.
- Counterparty risk: The fund may incur losses if any institution providing services or acting as a derivatives counterparty becomes insolvent.
