Benefits

- Aims to realise the difference in implied vs realised volatility of index CDS options
- Has historically delivered higher returns than similar strategies selling volatility in equities
- Reduced market exposure via daily delta hedging

About the index

The JCREVOLP Index provides short exposure to volatility in North American and European High Yield CDS markets by tracking the return of two credit volatility indices, rebalanced to an equal weighting monthly. To minimise market exposure, each credit volatility index sells and simultaneously delta hedges option strangles on the relevant CDS indices:

- iTraxx Crossover (XO) 5y (75 European sub-investment grade entities, equally weighted)
- CDX HY 5y (100 North American sub-investment grade entities, equally weighted)

Interest accrued on the notional cash amount makes up the remainder of the Index Value. Interest accrues at a rate equal to EONIA -0.25% (subject to change). Visit TabulaIM.com for a detailed methodology.

About Tabula

Tabula is a new ETF provider focused on fixed income for European institutional investors.

Tabula specialises in fixed income, supporting investors as flows into the asset class accelerate. The company believes that although fundamentals and market dynamics are positive for fixed income, the persistent innovation that ignited the equity ETF market has been lacking in this sector. As a result, the large incumbent funds continue to gather assets, but investors are looking for differentiated new products.

Tabula has launched its first range of ETFs and will be expanding its offering throughout the year, providing new and more precise tools for passive credit exposure. Over time, Tabula plans to move across the asset class, from investment grade and high yield credit into, for example: inflation, government debt, emerging markets, bank capital, money markets, ESG strategies and Solvency II-efficient funds.

Tabula is working in partnerships with HSBC, IHS Markit, Cheyne Capital, KB Associates, ICE and PWC.
