Domicile:	Ireland
Base currency:	EUR
Share class currency:	EUR
ISIN:	IE00BH059L74
UK distributor/reporting status:	Yes
ISA & SIPP eligible:	Yes

## Investment process

The Fund aims to directly replicate the index composition via CDS index positions and cash collateral (typically investment grade European sovereign bonds with maturity <12 months). To minimise counterparty risk, CDS index trades are executed through regulated brokers and centrally cleared.

## Investment objective

The Tabula European iTraxx Crossover Credit UCITS ETF (EUR) - Accumulating aims to track the iTraxx European Crossover Long Credit Index (ITRXXOVL Index), less fees and expenses.

## About the index

The ITRXXOVL Index provides exposure to high yield European corporate credit. To emphasise credit risk and reduce direct interest rate risk, it takes exposure via a liquid credit default swap (CDS) index rather than individual corporate bonds:

- iTraxx Crossover 5y (75 sub-investment grade entities, equally weighted)

The index reflects the return from selling protection on the current series of iTraxx Crossover 5y. It has market exposure of 100%, rebalanced monthly. Exposure is calculated as the ratio of CDS bond equivalent price to index value, so the ratio of notional to Net Asset Value may not be exactly 100%.

## Performance

Index values are calculated by IHS Markit. Past performance (actual or simulated) is not a reliable indicator of future performance.

	Sep 14 - Sep 15	Sep 15 - Sep 16	Sep 16 - Sep 17	Sep 17 - Sep 18	Sep 18 - Sep 19
Fund (after fees):	n/a	n/a	n/a	n/a	n/a
Index:	1.4%	4.5%	8.8%	2.4%	11%

	YTD	1m	1y	3y (ann.)	5y (ann.)	Since fund inc.	Since share class inc.	Volatility	Sharpe ratio
Fund (after fees):	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a
Index:	5.1%	-0.8%	11%	4.0%	3.6%	4.8%	4.8%	5.1%	0.78

Data: Tabula IM/IHS Markit, 30 November 2019. Volatility and Sharpe ratio are calculated over 5 years.

### Credit exposure - country

### Credit exposure - sector

### Credit exposure - rating

Data: Tabula IM, 30 November 2019. Charts show the percentage of total CDS index notional. CDS index ratios in table reflect the notional relative to NAV. Weighted CDS spread refers to the spreads weighted by the CDS notional to NAV ratio(s). Credit DVO1 is the expected change in NAV for a 1bp change in credit spreads. The estimated 12m yield calculation, which does not include fees and expenses, involves a number of assumptions and approximations and is not a guarantee of future returns.

## Key risks

- No capital protection: The value may go down as well as up and you may not get back the amount invested.
- Market risk: The fund is primarily exposed to credit risk. Returns will suffer if there is a default, or higher perceived risk of default, among the entities referenced by the CDS indices, or a write-down ("bail in") of an entity's debt by financial authorities. The fund may also be impacted by other factors affecting the value of debt securities issued by those entities. When selling CDS on subordinate debt, such debt may be subordinate to senior debt.
- Leverage: The fund may use leverage, so losses may be magnified.
- Liquidity risk: Lower liquidity means there are insufficient buyers or sellers to allow the fund to sell or buy investments readily. Neither the Index provider nor the issuer make any representation or forecast on the liquidity of CDS transactions.
- Counterparty risk: The fund may incur losses if an institution providing services or acting as a derivative counterparty becomes insolvent.
- Credit risk: The issuer of a financial asset held within the fund may not pay income or repay capital to the fund when due.
- OTC Total Return Swap risk: Swap returns are subject to the returns of the Index or reference assets. Valuations of a fund's investments may in certain circumstances only be available from a limited number of market participants who may also act as counterparties to these transactions. Such valuations may therefore be subjective and there may be substantial differences between any available valuations.
- Currency risk: Currency hedging may not completely eliminate currency risk in the Sub-Fund and may affect its perform

## Important information
