

# Tabula European iTraxx Crossover Credit Short UCITS ETF (EUR) - Accumulating

Passive short exposure to European credit markets, with enhanced liquidity

Net Asset Value: EUR 96.9457  
29 February 2020

**Capital is at risk. The value of your investment may go down as well as up and you may not get back the amount you invested.**

Investors should read the key risks section of this document, Key Investor Information Document and Prospectus prior to investing.

## Investment objective

The Tabula European iTraxx Crossover Credit Short UCITS ETF (EUR) - Accumulating aims to track the iTraxx European Crossover Credit Short index (ITRXXOVS Index), less fees and expenses.

## About the index

The ITRXXOVS Index provides short exposure to high yield European corporate credit. To emphasise credit risk and reduce direct interest rate risk, it takes exposure via a liquid credit default swap (CDS) index rather than corporate bonds:

- iTraxx Crossover 5y (75 sub-investment grade entities, equal weight)

The index reflects the return from buying protection on the current series of iTraxx Crossover 5y. It has market exposure of 100%, rebalanced monthly. Exposure is calculated as the ratio of CDS bond equivalent price to index value, so the ratio of notional to Net Asset Value may not be exactly 100%.

## Investment process

The Fund aims to directly replicate the index composition via CDS index positions and cash collateral (typically investment grade European sovereign bonds with maturity <12 months). To minimise counterparty risk, CDS index trades are executed through regulated brokers and centrally cleared.

## Performance

|              | Dec 14 - Dec 15 | Dec 15 - Dec 16 | Dec 16 - Dec 17 | Dec 17 - Dec 18 | Dec 18 - Dec 19 |

### Credit exposure - country

### Credit exposure - sector

### Credit exposure - rating

Data: Tabula IM, 29 February 2020. Charts show the percentage of total CDS index notional. CDS index ratios in table reflect the notional relative to NAV. Credit DV01 is the expected change in NAV for a 1bp change in credit spreads. The estimated 12m yield calculation, which does not include fees and expenses, involves a number of assumptions and approximations and is not a guarantee of future returns.

## Key risks

- No capital protection: The value may go down as well as up and you may not get back the amount invested.
- Market risk: The fund is primarily exposed to credit risk. Returns will suffer if there is a default, or higher perceived risk of default, among the entities referenced by the CDS indices, or a write-down ("bail in") of an entity's debt by financial authorities. The fund may also be impacted by other factors affecting the value of debt securities issued by those entities, including changes in interest rates and exchange rates. When selling CDS on subordinate debt, such debt may be subordinate to senior debt.
- Short exposure risk: The Fund uses a short market exposure to the underlying market with rebalancing on a monthly basis. The performance of the Fund over periods longer than one month may not be inversely proportional or symmetrical with the returns of long positions in the underlying instruments. The assumed return on cash in the index also contributes to asymmetry in returns versus a long position. The Fund is intended for investors who wish to take a short-term view on the Index and whose investments are not intended as buy and hold.
- Leverage: The fund may use leverage, so losses may be magnified.
- Liquidity risk: If there are insufficient buyers or sellers of CDS indices, the fund may not be able to match index exposure exactly and the fund may not be able to buy or sell investments readily. Neither the index provider nor the Issuer make any representation or forecast on the Liquidity of CDS transactions.
