## Investment objective

The Tabula Global IG Credit Curve Steepener UCITS ETF (EUR) - Accumulating aims to track the iTraxx-CDX IG Global Credit Steepener Index (ITXCDXST Index), less fees and expenses.

## About the index

The ITXCDXST Index provides exposure to credit curve steepness in North American and European Investment Grade CDS markets. The index tracks the return of taking equal positions on CDS indices by selling 5y protection and buying 10y protection:

- 50% iTraxx Europe 5y and 10y (125 investment grade entities, equally weighted)
- 50% CDX IG 5y and 10y (125 investment grade entities, equally weighted)

The Index is rebalanced monthly to maintain an approximate 3:1 market exposure to the short On-the-Run 10 Year Index CDS position where the weight of the long On-the-Run 5 Year Index CDS position is determined to offset the credit sensitivity of the 10 Year position. Interest accrued on the notional cash amount makes up the remainder of the index value. Interest accrues at a rate equal to €STR - 0.07% (subject to change).

## Investment process

The ETF aims to directly replicate the index composition via CDS index positions and cash collateral (typically investment grade European sovereign bonds with maturity <12 months). To minimise counterparty risk, CDS trades are executed through regulated brokers and centrally cleared.

## Key risks

- No capital protection: The value may go down as well as up and you may not get back the amount invested.
- Market risk: The fund is primarily exposed to long and short credit risk. Returns will increase if there is a default, or higher perceived risk of default, among the entities referenced by the CDS indices, or a write-down ("bail in") of an entity's debt by financial authorities. The Sub-Fund may also be impacted by other factors affecting the value of debt securities issued by those entities, including changes in interest rates and exchange rates. When buying and selling CDS on subordinate debt, such debt may be subordinate to senior debt.
- Risk of financial derivatives and techniques: The Fund invests in financial derivative instruments to gain both long and short market exposure to the underlying market with rebalancing on a monthly basis. The performance of the Sub-Fund over periods longer than one month may not be inversely proportional or symmetrical with the returns of the reverse positions in the underlying instruments.
- Foreign exchange risk: The Fund invests in EUR and USD denominated assets and does not provide a hedge to currency exposure in the base class. Strengthening or weakening of currencies may impact performance.
- Leverage: The fund may use leverage, so losses may be magnified.
- Liquidity risk: If there are insufficient buyers or sellers of CDS indices, the fund may not be able to match index exposure exactly and the fund may not be able to buy or sell investments readily. Neither the index provider nor the Issuer make any representation or forecast on the Liquidity of CDS transactions.
- Counterparty risk: The fund may incur losses if an institution providing services or acting as a derivative counterparty becomes insolvent.
- Credit risk: The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.
