Investment objective

The Tabula FTSE Indian Government Bond Short Duration UCITS ETF (USD) - Accumulating (the Fund) aims to track the FTSE Indian Government Bond FAR Short Duration Capped Index (CFIIFSDU Index), less fees and expenses.

About the index

The Index provides exposure to INR-denominated investment grade government bonds.

To be included, bonds require a minimum six months and a maximum five years maturity, as well as a minimum amount outstanding of INR 250 billion.

The Index has a 25% cap weighting per issuer and the minimum number of bonds in the index is six.

A detailed methodology is available in the documents section of tabulaim.com

Investment process

The ETF invests in a portfolio of sovereign bonds that reflects the composition of the Index as far as practicable, less fees and expenses.

Key risks

- **No capital protection:** The value of your investment may go down as well as up and you may not get back the amount you invested.
- **Liquidity risk:** Lower liquidity means there are insufficient buyers or sellers to allow the Sub-Fund to sell or buy investments readily. Neither the Index provider nor the issuer make any representation or forecast on liquidity.
- **Counterparty risk:** The Sub-Fund may incur losses if any institution providing services such as safekeeping of assets or acting as a derivatives counterparty becomes insolvent.
- **Credit risk:** The issuer of a financial asset held within the Fund may not pay income or repay capital to the Sub-Fund when due.
- **Emerging markets risk:** issuers from emerging markets are generally more sensitive to economic and political conditions than developed markets. Other factors include a greater 'liquidity risk', restrictions on investment or transfer of assets, failed/delayed delivery of securities or payments to the Fund and sustainability-related risks.

For more information on the risks to the Sub-Fund, please see the supplement for the Sub-Fund and the prospectus of Tabula ICAV, available on the product pages of tabulaim.com
